

**AMENDMENTS TO THE ABSTRACT:**

Please replace the paragraph (Abstract) beginning at page 36, line 3 with the following rewritten version:

The present invention relates to a mobile communication terminal and method of driving the same, and an idle screen service system and method using the same. According to the present invention, the method includes the steps of (a) allowing a user to set ~~eontents~~ content information; (b) allowing a service-providing server to classify the ~~eontents~~ content information and to allocate a stack; (c) allowing idle screen information corresponding to the ~~eontents~~ content information to be pushed; (d) allowing the user to request detailed ~~eontents~~ content information and to receive the requested ~~eontents~~ content information; and (e) allowing the ~~eontents~~ content information to be displayed according to a predetermined screen configuration of a mobile communication terminal, wherein the ~~eontents~~ content information of step (c) is displayed according to a given template configuration.
